## xiCX

- XIMEA designed COM express PC for compact extreme speed
- COM express backbone taking full advantage of PCIe & USB camera throughput
- Can save from and interface to all our high speed cameras & switches

**COM express** computer by XIMEA allows development with the full range of cameras from USB to PCIe speeds in a compact platform. The switch contained inside allows many cameras input to the computer at full speed for processing, or saving. GPIO sync allows all cameras in the system to be trigered simultaneously.
